APPROACH

Researcher workflow integration

Complementary interventions, shown at their primary entry point. Together, they connect planning, computation and research outputs.

PLANNING

1

RMPs · Argos

A living, machine-actionable reproducibility plan, updated as the project evolves with key decisions, versions, identifiers and links.

EXECUTING

2

GNU Guix

A rebuildable computational environment capturing the software stack and dependencies needed to reproduce computation.

PUBLISHING

3

RO-Crate

A machine-readable research package connecting data, code, workflows, software and provenance for sharing, preservation and reuse.

CROSS-CUTTING ENABLING I

Role-specific training, certified local champions, peer influence, local stewardship

Funded by
the European Union
